

Login to the website

<https://kameli.com/wp-admin>

Username: ali

Password: K@mEl!20!9

find the file manager from here:

<https://wencilworldwide.d.pr/rj24iu>

Or click on this link to find it:

<https://kameli.com/wp-admin/admin.php?page=file-manager>

Then find the file in the file manager – for example:

<https://kameli.com/wp-content/plugins/revslider/admin/assets/images/dummy.png>

You can find this here:

wp-content → plugins → revslider → admin → assets → images

Find a file "dummy.png" and then rename it to dummy-old.png, you just add -old to end of the file name. Then upload the downloaded optimized file in the same place. It should not ask you if you want to replace the file anytime!

After uploading the files there shouldn't be any file the report (<https://gtmetrix.com/reports/kameli.com/UN2QxICS>) when I retest it!
